Contributing Author	Tzuchen Liang
Abstract	We extend the definition of a cutoff from finite Markov chains to the evolution of probability distributions by the Perron-Frobenius operator of 1D maps. We prove that if the map has full shift symbolic dynamics then, for appropriately chosen initial distributions, such an evolution exhibits a total variation cutoff. Moreover, the initial distributions can be chosen so that the limiting evolution has the same normal shape as is found in many Markov chain problems.
Manuscript Type	Research Article
Submission Date	2011-04-14 00:50:26
